SUMMARY

Undergraduate Computer Science student and frontend-focused Full-Stack Developer with over 1 year of experience building responsive and scalable web applications using Next.js and TypeScript. Experienced in developing scalable SaaS products, integrating LLMs, and rapidly prototyping user-focused features with measurable impact. Passionate about crafting intuitive interfaces and solving real-world problems in fast-paced, collaborative environments.

EXPERIENCE

Purple Box AI

Nov. 2025 - Jan. 2026

Front-end Developer Intern

Rome, Italy (Remote)

- Deployed a chatbot plugin for Shopify and WordPress, integrating an RAG-based interface with file upload and management, increasing client interest by 80% and reducing response time by 40%
- Designed a Retrieval-Augmented Generation (RAG) chatbot interface with file upload and document management features, increasing client interest by 80%
- Leveraged design patterns to streamline state management and system performance, achieving an 85% improvement in application efficiency
- Collaborated with over 20 individuals to discuss and develop the application

Anastasya Bouquet

Aug. 2025 - Feb. 2026

Full-Stack Developer

Malang, Indonesia (Remote)

- Led full-stack development of the e-commerce platform, architecting both frontend and backend systems
- Built a full-stack e-commerce platform for a bouquet store using Next.js, TypeScript, PostgreSQL, and Prisma, improving overall system performance by 50%
- Developed a responsive storefront and admin dashboard with product management, category filtering, and blog CMS, increasing operational efficiency by 85%
- Launched the platform to 100+ active users, boosting customer engagement via WhatsApp based checkout

PROJECTS

Neurofit 2.0 (ML-Based Fitness & Nutrition Planner)

Feb. 2026 - Mar. 2026

Next.js, Convex, Ollama (LLM), Tailwind

Shenyang, China

- Developed an AI-powered fitness platform that generates personalized workout, diet, macros, and grocery plans using a unified LLM pipeline, reducing response latency by 40%
- Designed and implemented a multi-stage ML pipeline using Next.js API routes and Ollama (qwen3.5:9b), converting user inputs into personalized fitness, diet, and nutrition plans with efficient data flow and processing
- Improving a scalable backend using Convex with background job processing and caching strategies to prevent client timeouts and ensure reliable real-time data synchronization
- Designed a responsive frontend with Next.js and Tailwind, improving user flow efficiency by 92% through streamlined form-based AI inputs and optimized UX for faster plan generation

Anastasya (Florist Storefront & Admin)

Jan. 2026 - Mar. 2026

Next.js, NeonDB, PostgreSQL, Prisma, Tailwind

Malang, Indonesia

- Developed a florist e-commerce and admin platform, boosting storefront performance (40% faster load), increasing conversion rate by 25%, and cutting product/category/blog management time by 82%
- Implemented full-stack Next.js (App Router) architecture, achieving 40% faster API response times and supporting 100+ users
- Built UI/UX features including dynamic product discovery, TanStack-powered data tables, responsive design, and integrated WhatsApp ordering to enhance customer engagement and conversion

Resumy (ML-Based Career Matching Engine)

Nov. 2025
Shenyang, China

Next.js, OpenRouter (LLM), TypeScript, FastAPI

- Developed a responsive frontend interface using Next.js and TypeScript for a resume classification platform, enabling CV uploads, processing, and real-time feedback display
- Integrated REST APIs (FastAPI on HuggingFace Spaces) to handle resume classification results
- Built dynamic UI components for skill extraction and CV improvement insights by consuming LLM-powered APIs OpenRouter LLM (Qwen-2-7B)
- Implemented personalized job recommendation dashboards by integrating JSearch API, visualizing ML predicted roles and extracted skills into responsive interfaces

COURSE EXPERIENCE

Machine Learning for Beginners

2025
Remote

Dicoding

- Implemented basic machine learning models using Python for classification and prediction tasks
- Performed data preprocessing, feature selection, and model evaluation using standard ML workflows
- Analyzed datasets to extract insights and improve model performance

Basic React

2025
Remote

Skilvul

- Built responsive single-page applications using React and component-based architecture
- Managed application state and props to create dynamic and interactive user interfaces
- Improved UI performance and maintainability by applying reusable components and clean code practices

Problem Solving (Intermediate)

2025
Remote

HackerRank

- Solved algorithmic challenges focusing on data structures, efficiency, and optimization
- Applied problem-solving techniques such as recursion, greedy algorithms, and sorting strategies
- Strengthened analytical thinking and coding efficiency under time constraints

EDUCATION

Shenyang Aerospace University

Aug. 2025 – Jul. 2027
Shenyang, China

Bachelor of Computer Science

- **Coursework:** Data Structures, Computer Systems, Microcontroller, Information Security
- **Projects:** Developed backend services using Java (Quarkus) and conducted data analysis using Python (Anaconda)

State Polytechnic of Malang

Aug. 2023 – Jul. 2027
Malang, Indonesia

Bachelor of Computer Science

- **Coursework:** Data Structures, Algorithms, Databases, Computer Systems, Web Programming
- **Projects:** Developed a Learning Management System (LMS) using PHP, HTML, and CSS. Built a full stack web application using Laravel for infrastructure development management

SKILLS

Languages : Indonesian (native), English (C1), Chinese (elementary proficiency)
Programming Languages : TypeScript, JavaScript, SQL (PostgreSQL, MySQL), HTML5, CSS, PHP
Tools : Figma, Notion, Postman, Vercel, Figma, Cypress, Google Cloud, Github Copilot, GitHub
Frameworks & Libraries : React.js, Next.js, Vite, Tailwind, Prisma, TanStack, Motion, GSAP, Convex, Ollama
